Career Summary

Fractal Analytics - Frontend Engineer
February 2019 - Present

- Responsible for developing intuitive User Interfaces for several web applications like Cognitive BI solutions which can be used by data analysts and some other Management applications for clients like The Coca Cola Company and P&G.
- Worked with charting libraries like AmCharts and Highcharts for creating visuals. Also integrated rich features like voice input functionality in one of the solutions with help of google's speech-to-text API.
- Worked on REST APIs integration for fetching dynamic data. Used Redux architecture to create a centralized store for the application for smooth communication between various components.

Technical Bazaar Solutions - Frontend Engineer
March 2017 - February 2019

- Developed User Interface based on client requirements and designs.
- Worked closely with backend team to understand REST APIs structure and integrate it in UI for fetching data from the database.
- Worked closely with backend team to understand REST APIs structure and integrate it in UI for fetching data from database.

Built.io - Internship
June 2016 - September 2016

Acquired entry-level knowledge of how things work at an actual software company. Learned some advanced JavaScript and basics of NodeJs. Got trained under well-experienced developers.
